

## Letter of Intent Sustainable Agriculture Commitment

Following the Vision and Mission of being "The Power to Enhance Life," Osotspa Public Company Limited and its subsidiaries (Osotspa) have developed the company's Sustainability Strategy, which focuses on laying a solid foundation for the organization to be future-ready for new challenges and upcoming opportunities. This refers to the business's ability to grow alongside partners even in a volatile business environment.

Agricultural raw materials play an important role in the production of high-quality products, as well as in reducing environmental and societal impacts throughout the supply chain. All of which contributes to increased consumer satisfaction. Osotspa is committed to the sustainable sourcing of agricultural raw materials. We identified and communicated sustainability issues with key agricultural products (sugarcane, cassava, corn, palm oil, and soybeans) related to supply standards as follows:

- Responsible Production Standards covering economic, governance, social and environmental aspects. Global certification, such as Bonsucro and RSPO.

Or

- Local standards relevant to sustainability issues, for example:
  - Greenhouse Gas Emission and Energy Efficiency
  - Soil and Water Resource Conservation
  - Pollution and Waste Management
  - Agricultural Plot and Pesticide Management
  - Biodiversity and Forests
  - Child Labor and Forced Labor
  - Principles of Labor Practice and Working Conditions
  - Occupational Health and Safety
  - Business Ethics

In this regard, collaboration with business partners and stakeholders is critical. Osotspa would like to request that suppliers (tier-1 and non-tier 1) provide information on products and/or product sources in accordance with the standards or sustainability issues stated above in order to collectively build sustainability throughout the supply chain.
